Improvement:

- When pressing Strg + blank, e.g., in the state automaton, all enumeration members are proposed. Including the enumeration members of data types that are not part of the variables. In the list of proposed elements only want to see those enumeration members that are relevant for me, i.e., the enumeration members that belong to a data type used in one of the variables. This should apply for all proposition lists. For an example see attached Fig. "Improvement1".
