Copy, paste, delete with keyboard shortcuts are now possible in the navigator view.
Still it is not possible in the Data Dictionary Editor respectively TreeViewer.

- Status changed from New to Resolved

Resolved but only for one selection. Multi-selection is doable as well and easily but that would require overlapping with kernel's functionality which I strongly dislike. So if necessary, it should be restructured before implementing.

Multi-selection is now done and the kernel was modified to allow it.
I also added cut, undo and redo.

Sorry, multi-selection still not doable but this is not a problem of this issue but of the tree viewer.

Note that one must be quite insisting with the keys though... i.e., the first attempt might not work, dunno why. Probably an Eclipse pb.

With the nightly built of today 02.02.2015, the shortcut for the "Del", "Copy", "Cut", "Paste" actions work perfectly.
