<b>Description</b>			
Step-by-step to get to the situation:			
<ol style="list-style-type: none"><li>1. open the attached model</li><li>2. go to the "A/G, Contracts, Patterns" aspect of the component in the component architecture</li><li>3. check the only specification atom</li><li>4. it should be FAIL and the trace should be now displaying in the "Counterexample Viewer" view</li><li>5. observe (reading the text) how the counter-example is made a first state and then another state looping on itself</li><li>6. then click "Open Simulator" to open the counter-example in the simulator</li><li>7. run the simulator</li></ol>			
What happens:			
- after two steps you get to the end of the simulation (Pop-up "Couterexample simulation ended", "Start from the beginning")			
Expected:			
- a pop-up indicating the end of the <b>loop</b>			
- the simulation automatically goes back at the beginning of the <b>loop</b> , not at the beginning of the simulation
