<b>Description</b>			
In order to connect two ports p1 and p2, one has to start from p1 , press the mouse and drag it to p2. If p1 is connected to some port p3 with a wired p1-p3, it would be nice to allow to connect p2 by dragging the mouse over the wire p1-p3.  Also one cannot from an input to an output; we have to start from the output and drag he mouse to the input. Would be useful to allow both directions

Maybe this can be considered as a requirement for the new implementation.

#### #9 - 02/04/2020 11:22 AM - Johannes Eder

- Status changed from New to Rejected

- Assignee deleted (Florian Hölzl)

Not a bug. If necessary in the future, new feature request has to be created.
