

AF3 Phoenix - Change Request #3468

Unify the emptyOrAlreadyExists in several aspects

07/03/2018 11:01 AM - Anonymous

Status:	New	Start date:	07/03/2018
Priority:	Normal	Due date:

Target version:	Backlog		

Description

The method emptyOrAlreadyExists is implemented in several classes.

Most of the implementation is identical for all classes. Differences are:

- string shown in the error message: this can either be unified as "Signal name is not valid" and "A Signal with this name already exists." or the string can be passed as arguments

- the local variable from which the getSignals() is called

The latter requires that all the types of those variables (at least MoonSolutionRequirementSpecification, ModeSpecification, FunctionalSpecification) extend ISignalsContainer.

This requires modifying the model so probably also creating a migrator (not sure if this is really the case)
