#### Description

#### Current status

The IConnectionCompositorService creates IConnections when "connect()" is called. However, the return type of this operation is a boolean and no other reference to the created connection exists. In cases where knowledge about the created connection is required (e.g., output transformers of the DSE), the compositor service cannot be directly used.

#### Proposed change

Let the connect() method return the created connection. If the creation failed, null can be returned.
