Description			
Current Status			
The current documentation of the allocation.ui plugin is not easily understandable and is missing some information to create ParameterTable(Editors).			
Proposed improvement			
Create step-by-step instructions to create such tables and editors based on an example. I have just created a simple parameter table and transferred the results to an example AF3 plugin that could be used as a basis.			
The examples in the task plugin do not qualify due to their complexity.			
I think that this is indeed required as I am familiar with allocation tables, but it took me ~5h to get AF3 to the point where it shows the table.
