Description

In the course of the transition of GEF/SWT editors and views to JavaFX, those editors and views have been removed from the plugin.xml files of the respective plugins but the source code still exists. The reason for this is that if anything does not work in the newly built editors/views, we can immediately switch back to the old implementation. In particular, w.r.t. to the practical course during summer 2020 this is necessary to prevent from blockers in the course.

The source code of the following editors/views (binding+editor) still has to be removed:
(IMPORTANT: This list is **not** complete. Further editors/views may be added to this list)
